ICC Solutions kick starts 2019 with immediate availability of the Visa payWave Test Tool (VpTT)

ICC Solutions, a leader in the testing solutions and services space, has started 2019 with the launch of the Visa payWave Test Tool (VpTT).

With an already impressive selection of terminal test suites, qualified by the major payment brands, the addition of the Visa payWave suite gives customers greater choice when selecting a test tool vendor to provide the Visa tool.

The VpTT enables acquirers to test the compliance of contactless-enabled payment solutions deployed on their acquiring network. Visa requires that VpTT testing is carried out on any new contactless terminal hardware, software or network configuration deployed within the Europe region, this includes:

- All point-of-sale (POS) deployments
- Mass Transit Transaction Model (MTT)
- Known Fare Transit Model
- Mobile (mPOS) Deployments
- Unattended POS and Vending
- ATMs

With over 20 years serving the payment industry, an extensive test tool portfolio and unrivalled customer service, ICC Solutions is delighted with this addition – giving even greater diversity to new and existing customers.

Reliable Testing. Conclusive Results.

Marc Regan, Acquirer Team Manager at ICC Solutions commented “The Visa payWave Test Tool extends our portfolio of test suites validated by Visa, affording our customers the flexibility to fulfil more of their test requirements from their preferred supplier.”

Richard Burdett, Payment Technology Services at Visa commented “Testing the implementation of any new or updated acceptance solution is an essential part of providing global interoperability, payment security and a seamless customer experience when using Visa payment products. The new VpTT tool from ICC Solutions provides acquirers and payment implementers with a solution for all stages of the development and implementation of any Visa contactless acceptance solution”.
