Visa Contactless Transit Kernel Specification (VCTKS)

NOW AVAILABLE!

The ICCSimTMat Visa VCTKS (Visa Contactless Transit Kernel Specification) is now available to purchase from ICC Solutions.

The VCTKS test suite defines the technical differences between the VCPS contactless kernel used in retail acceptance environments and the contactless kernel used in transit acceptance environments, to guide vendors with implementing kernels that can be used in transit acceptance devices.

In essence it assists terminal vendors by determining the differences between transit and retail transaction processing. The VCTKS test suite replaces the VOQOS test suite.

As contactless payments increase at a rapid pace around the globe, particularly within the transit sector, the VCTKS test suite is an invaluable suite in assisting with this testing.
